

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Original) A toothbrush comprising:
a handle;
a head extending from the handle; and
a plurality of tufts of bristles extending from the head, each tuft of bristles being supported for rotation about only one axis, each tuft of bristles being rotatable independent of the other tuft(s) of bristles.
2. (Original) The toothbrush of claim 1, wherein each tuft has a range of rotation of about 60 degrees.
3. (Original) The toothbrush of claim 1, wherein each tuft can rotate about 30 degrees to either side of a vertical position in which the tuft is perpendicular to a top surface of the head.
4. (Original) The toothbrush of claim 1, further including at least one tooth cleaning element which cannot be rotated.
5. (Original) The toothbrush of claim 1, wherein each tuft includes at its non-brushing end a bearing which is substantially cylindrical in shape in its major portion, each bearing being secured in its own hollow space within the head, each bearing allowing rotation of its respective tuft.

6. (Original) The toothbrush of claim 5, wherein the head is made of at least two pieces which are joined together to secure the bearing within the head.

7. (Original) The toothbrush of claim 5, wherein a viscous substance is provided in each hollow space in the head to provide some resistance to rotation of the tufts.

8. (Original) The toothbrush of claim 1, wherein a portion of the head limits rotation of each tuft.

9. (Original) The toothbrush of claim 1, wherein the tufts are rotated by contact with a portion of an oral cavity.

10. (Original) The toothbrush of claim 1, wherein each tuft includes at its non-brushing end a living hinge, each living hinge being secured partially within the head, each living hinge allowing rotation of its respective tuft.

11. (Once Amended) The toothbrush of claim 1, wherein the axis about which each tuft is rotatable is substantially perpendicular to a long axis of the ~~element~~ tuft.

12. (Once Amended) An apparatus comprising:
a toothbrush head; and
a first group of tooth cleaning elements extending from the head and a second group of a plurality of tooth cleaning elements extending from the head,
the elements within each of the groups being of a common type and the type of elements in the first group being different than the type of elements in the second group, and
wherein each of the elements of the first group is nonrotatable, and each of the elements in the second group is supported for rotation about only one axis and independently rotatable with respect to one another.

13. (Previously Added) The apparatus of claim 12 wherein all of the tooth cleaning elements of the toothbrush are in the first and second group.

14. (Previously Added) The apparatus of claim 12 wherein the first group includes a plurality of tooth cleaning elements.

15. (Previously Added) The apparatus of claim 12 wherein each of the elements in the second group is adjacent to at least one of the elements in the first group.

16. (Previously Added) The apparatus of claim 12 wherein the interproximal residence time of elements in the second group is about 1.6 times or greater than the interproximal residence time of the elements in the first group.

17. (Previously Added) The apparatus of claim 12 wherein the elements in the second group are longer than the elements in the first group.

18. (Previously Added) The apparatus of claim 12 wherein the elements in the second group are made of polymer.

19. (Previously Added) The apparatus of claim 12 wherein each of the elements in the second group is a fin or tuft of bristles.

20. (Previously Added) The apparatus of claim 12 wherein each of the elements in the second group is a fin.

21. (Previously Added) The apparatus of claim 20 wherein each of the elements in the first group is a tuft of bristles.

22. (Previously Added) The apparatus of claim 12, further comprising a handle, and wherein the head extends from the handle.

23. (Previously Added) The apparatus of claim 22, wherein the axis about which each element in the second group is rotatable is substantially perpendicular to a long axis of the element.

24. (Previously Added) The apparatus of claim 12 wherein the elements in the first group are free of spring bias tending to rotate the elements after deflection.

25. (Twice Amended) An apparatus comprising:
a toothbrush head; and
a plurality of tufts of bristles extending from the head, each tuft of bristles being supported for rotation about only one axis, each tuft of bristles being rotatable independent of the other tuft(s) of bristles,
further including at least one tooth cleaning element which cannot be rotated.

26. (Previously Added) The apparatus of claim 25, wherein each tuft has a range of rotation of about 60 degrees.

27. (Previously Added) The apparatus of claim 25, wherein each tuft can rotate about 30 degrees to either side of a vertical position in which the tuft is perpendicular to a top surface of the head.

28. Cancelled.

29. (Previously Added) The apparatus of claim 25, wherein each tuft includes at its non-brushing end a bearing which is substantially cylindrical in shape in its major portion, each bearing being secured in its own hollow space within the head, each bearing allowing rotation of its respective tuft.

30. (Previously Added) The apparatus of claim 29, wherein the head is made of at least two pieces which are joined together to secure the bearing within the head.

31 (Previously Added) The apparatus of claim 29, wherein a viscous substance is provided in each hollow space in the head to provide some resistance to rotation of the tufts.

32 (Previously Added) The apparatus of claim 25, wherein a portion of the head limits rotation of each tuft.

33 (Previously Added) The apparatus of claim 25, wherein the tufts are rotated by contact with a portion of an oral cavity.

34. (Previously Added) The apparatus of claim 25, wherein each tuft includes at its non-brushing end a living hinge, each living hinge being secured partially within the head, each living hinge allowing rotation of its respective tuft.

35. (Previously Added) The apparatus of claim 25, wherein the axis about which each tuft is rotatable is substantially perpendicular to a long axis of the element.

36. (Previously Added) The apparatus of claim 25, further comprising a handle.

37. (New) A toothbrush head, comprising:

a plurality of first tooth cleaning elements extending from the head and a second tooth cleaning element extending from the head;

the first tooth cleaning elements being different from the second tooth cleaning element;
and

wherein the second tooth cleaning element extends from a socket and wherein the the second tooth cleaning element is rotatably disposed within the socket.

38. (New) The toothbrush head of claim 37, further comprising a plurality of the second tooth cleaning elements.

39. (New) The toothbrush head of claim 37, wherein the plurality of first tooth cleaning elements are non-rotatable.

40. (New) The toothbrush head of claim 37, wherein the second tooth cleaning element comprises an elastomer.

41. (New) The toothbrush head of claim 40, wherein the second tooth cleaning element is in the form of a fin.

42. (New) The toothbrush head of claim 41, the second tooth cleaning element further comprises a bearing that is disposed within the socket.

43. (New) The toothbrush head of claim 37, wherein the second tooth cleaning element has a range of rotation of less than about 60 degrees.

44. (New) The toothbrush head of claim 43, wherein the range of rotation is limited by a portion of the head.

45. (New) The toothbrush head of claim 37, wherein the head further comprises a top surface and the top surface has an aperture and wherein the second tooth cleaning element extends from the aperture.

46. (New) The toothbrush head of claim 38, wherein the plurality of first tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent an edge of the toothbrush head.

47. (New) The toothbrush head of claim 46, wherein the plurality of second tooth cleaning elements comprises about 4.

48. (New) The toothbrush head of claim 46, wherein the plurality of first tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent two edges of the toothbrush head.

49. (New) A toothbrush, comprising the toothbrush head of claim 37 and a handle attached to the toothbrush head.

50. (New) A toothbrush head, comprising:
a top surface;
a socket;
a tooth cleaning element extending from the top surface of the head, wherein the tooth cleaning element comprises an elastomeric first portion for contacting the teeth and a second portion, wherein the second portion is rotatably disposed within the socket and wherein the first portion is formed separately from the second portion and wherein the first portion is attached to the second portion.

51. (New) The toothbrush head of claim 50, further comprising a plurality of the tooth cleaning elements.

52. (New) The toothbrush head of claim 50, wherein the tooth cleaning element is in the form of a fin.

53. (New) The toothbrush head of claim 50, wherein the second portion is a bearing.

54. (New) The toothbrush head of claim 50, wherein the second tooth cleaning element has a range of rotation of less than about 60 degrees.

55. (New) The toothbrush head of claim 50, wherein the range of rotation is limited by a portion of the head.

56. (New) The toothbrush head of claim 50, the top surface has an aperture and wherein the tooth cleaning element extends from the aperture.

57. (New) The toothbrush head of claim 51, further comprising a plurality of second tooth cleaning elements that are non-rotatable.

58. (New) The toothbrush head of claim 57, wherein the tooth cleaning elements and the second tooth cleaning elements are alternately arranged adjacent an edge of the toothbrush head.

59. (New) The toothbrush head of claim 58, wherein the plurality of second tooth cleaning elements comprises about 4.

60. (New) The toothbrush head of claim 58, wherein the plurality of first tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent two edges of the toothbrush head

61. (New) The toothbrush head of claim 50, wherein the second portion is formed by molding.

62. (New) A toothbrush, comprising the toothbrush head of claim 50 and a handle attached to the toothbrush head.

63. (New) A toothbrush head, comprising:
a top surface having a first aperture;
a second aperture opposite the first aperture;
a socket;
a rotatable tooth cleaning element extending from the top surface of the head, wherein the tooth cleaning element comprises a first portion for contacting the teeth and a second portion, wherein the second portion is disposed within the socket; and
wherein the second aperture is covered by a piece that forms a bottom surface of the head that is opposite the top surface of the head.

64. (New) The toothbrush head of claim 63, further comprising a plurality of the rotatable tooth cleaning elements.

65. (New) The toothbrush head of claim 64, further comprising a plurality of second tooth cleaning elements that are non-rotatable.

66. (New) The toothbrush head of claim 63, wherein the first portion of the tooth cleaning element comprises an elastomer.

67. (New) The toothbrush head of claim 66, wherein the tooth cleaning element is in the form of a fin.

68. (New) The toothbrush head of claim 63, wherein the second portion is in the form of a bearing.

69. (New) The toothbrush head of claim 63, wherein the tooth cleaning element has a range of rotation of less than about 60 degrees.

70. (New) The toothbrush head of claim 69, wherein the range of rotation is limited by a portion of the head.

71. (New) The toothbrush head of claim 64, wherein the plurality of rotatable tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent an edge of the toothbrush head.

72. (New) The toothbrush head of claim 71, wherein the plurality of tooth cleaning elements comprises about 4.

73. (New) The toothbrush head of claim 71, wherein the plurality of first tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent two edges of the toothbrush head.

74. (New) A toothbrush, comprising the toothbrush head of claim 63 and a handle attached to the toothbrush head.

75. (New) A toothbrush head, comprising:

a top surface comprising an aperture; and
a tooth cleaning element extending from the aperture, wherein the tooth cleaning element
comprises an elastomer and wherein the tooth cleaning element is rotatably disposed within a
socket of the head.

76. (New) The toothbrush head of claim 75, further comprising a plurality of the
tooth cleaning elements.

77. (New) The toothbrush head of claim 76, further comprising a plurality of second
tooth cleaning elements that are non-rotatable.

78. (New) The toothbrush head of claim 75, wherein the tooth cleaning element is in
the form of a fin.

79. (New) The toothbrush head of claim 75, wherein the tooth cleaning element has a
range of rotation of less than about 60 degrees.

80. (New) The toothbrush head of claim 79, wherein the range of rotation is limited
by a portion of the head.

81. (New) The toothbrush head of claim 77, wherein the plurality of rotatable tooth
cleaning elements and the plurality of second tooth cleaning elements are alternately arranged
adjacent an edge of the toothbrush head.

82. (New) The toothbrush head of claim 81, wherein the plurality of tooth cleaning
elements comprises about 4.

83. (New) The toothbrush head of claim 81, wherein the plurality of first tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent two edges of the toothbrush head.

84. (New) A toothbrush, comprising the toothbrush head of claim 75 and a handle attached to the toothbrush head.

85. (New) A toothbrush head, comprising:
a top surface; and
a tooth cleaning element extending from the top surface, wherein the tooth cleaning element comprises a living hinge.

86. (New) The toothbrush head of claim 85, further comprising a plurality of the tooth cleaning elements.

87. (New) The toothbrush head of claim 86, further comprising a plurality of second tooth cleaning elements that are non-rotatable.

88. (New) The toothbrush head of claim 85, wherein the tooth cleaning element comprises an elastomer.

89. (New) The toothbrush head of claim 85, wherein the tooth cleaning element is in the form of a fin.

90. (New) The toothbrush head of claim 85, wherein the head further comprises a socket and the tooth cleaning element is disposed within the socket.

91. (New) The toothbrush head of claim 85, wherein the head further comprises a top surface and the top surface has an aperture and wherein the tooth cleaning element extends from the aperture.

92. (New) The toothbrush head of claim 87, wherein the plurality of first tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent an edge of the toothbrush head.

93. (New) The toothbrush head of claim 92, wherein the plurality of tooth cleaning elements comprises about 4.

94. (New) The toothbrush head of claim 92, wherein the plurality of first tooth cleaning elements and the plurality of second tooth cleaning elements are alternately arranged adjacent two edges of the toothbrush head.

95. (New) A toothbrush, comprising the toothbrush head of claim 85 and a handle attached to the toothbrush head.
